

— BMOT — VA — VC - - - VD — 461 nm — 689 nm — 1075 nm (reservoir/dimple)

MOT: real vs. ideal detuning from $F'=11/2$ (near-resonance expanded)

STIR: same sequence type (theory), real detuning from $F'=9/2$ -- values pending, to complete

raw AOM (MHz, uncalibrated): 103.70 → 105.25, then 105.25-[?], final 105.309
